Maximum Subarray

KADANE / ARRAY / OPTIMIZATION

Given an integer array `nums`, find the contiguous subarray with the largest sum and return its sum.

A subarray is a contiguous non-empty sequence of elements within an array. Your solution should run in linear time.

CONSTRAINT SIGNAL

$1 \leq \text{nums.length} \leq 100,000$
 $-10,000 \leq \text{nums}[i] \leq 10,000$

EXAMPLE

Input `nums =`

 Python 3    main

```
1 def max_subarray(nums):
2     best = nums[0]
3     current = nums[0]
4
5     for value in nums[1:]:
6         current = max(value, current + value)
7         best = max(best, current)
8
9     return best
```
